IN THE CLAIMS:

- (Currently amended) A door glass guide for a vehicle, comprising:

 a glass guide mounted to be vertically fixed to a door panel;
 a garnish joined to an upper end of the glass guide to be vertically arranged;
 an elastic run channel internally secured starting from an upper end of the garnish and
 - a stabilizing assembly comprising:

extending to a lower end of the glass guide; and

[[a]] <u>an inner</u> contact member formed on a lower end of the stabilizing assembly that contacts an upper end of the glass guide;

an outer contact member formed on said stabilizing assembly that contacts said door panel; and

a connector formed on an upper end of the stabilizing assembly that encompasses a lower outer surface of the garnish, wherein the stabilizing assembly is mounted to the upper end of the glass guide and encompassing a lower outer surface of the garnish and formed to be separate from the garnish.
